

Laminated Letters & Logos

About these Letters:

Gemini uses .030 solid metal sheets of aluminum that have been treated to provide your desired finish. These sheets are then laminated onto your choice of one of 25 acrylic colors or Gemini's high density (10-12 lb/cubic foot) foam. The Bern-Lok lamination process is used to adhere the metal sheets to the substrate. This process is proprietary to Gemini, using a combination of heat, high pressure, and chemical bonding. Once the sheets are laminated, they are router cut using precision CNC equipment to provide the best mechanical cut possible.

Gemini Metal Laminate Acrylic & Foam Letters are just the ticket when the look and feel of metal is needed but a budget or installation method will not allow for it. Featuring an upscale look at a fraction of the cost, Gemini Metal Laminated Letters and logos are ideal for developing an elegant and professional look for corporate lobbies, government offices and other organizations. Designed for indoor applications, these letters can be used in limited exterior weather conditions thanks to Gemini's patented Bern-Lok™ process. With seven metal laminates and our full range substrates including our 25 acrylic colors plus Gemini's high density urethane foam—you have hundreds of design combinations to begin your design process.

Metal Laminate on Acrylic and Foam
